

**Putative or ectomycorrhizal fungal taxa and representative voucher specimens recorded from 2014-2017 in *Gilbertiodendron dewevrei*-dominated forests in the Dja Biosphere Reserve, Cameroon. Total current number of morphospecies is 297. Holotype and epitype collections are in bold. (updated 8-03-18)**

<sup>1</sup>Taxa lacking epithets are morphologically distinct species-level taxa as yet unidentified to species; taxa with epithets followed by “ined.” have been tentatively determined as new to science but are not yet formally described.

<sup>2</sup>”TH” and THDJA” numbers are in Terry Henkel’s collection series (Humboldt State University); “MCA” numbers are in M. Catherine Aime’s collection series (Purdue University); “KM” numbers are in Kennan Mighell’s collection series; "NS" numbers are in Noah Siegel's collection series; "JKU" numbers are in Jessie K. Uehling's number series; numbers in **bold** are type or epitype collections.

<sup>3</sup>Plot frequency is the number of 100 m<sup>2</sup> quadrats of sporocarp occurrence out of 450 total quadrats randomly sampled in three 1-ha plots of *Gilbertiodendron dewevrei* monodominant forest in 2014, 2016, 2017.
